SUMMARY

Indonesia-based software engineer, in the industry since 2019, focused on system design: how the pieces fit together and the trade-offs behind them. Work spans the stack, from backend services and API design to user-facing web and mobile applications.

WORK EXPERIENCE

Software Engineer, PT Rivolta Solusi Teknologi

Samarinda, Kalimantan Timur · May 2024 - Present

- Worked across 7 projects spanning backend APIs, admin dashboards, and mobile apps
- Initiated new projects, setting up Git, Scrum boards, and architecture
- Led full-stack development as Tech Lead (team of 3-5) and Scrum Master, managing UAT, Git workflows, and deployments across mobile and backend
- Designed a configurable rule engine for the mentor selection feature
- Integrated third-party SDKs for video calls, real-time notifications, and AI answers into a Q&A platform tested by 250+ users
- Improved app performance and backend scalability
- Resolved bugs and ensured system stability across projects
- Conducted technical interviews in English for 7 international candidates, and mentored interns

Selected projects:

- Multi-Floor Retail POS & ERP Platform: built the offline-first sync and sales-reconciliation core, plus the purchase-order, supplier-return, and inventory modules, spanning a Go API, a React back office, and an Electron cashier terminal, now in use across 5 floors and 7+ terminals
- API-Driven Video Conferencing Platform: architected a provider-agnostic video layer and built both the server-side and React SDKs for a multi-tenant, embeddable platform designed to be delivered as an API and SDKs
- Fresh Groceries Delivery Marketplace: built the shipment-tracking feature across backend, admin dashboard, and mobile app, plus role-based analytics dashboards, for a multi-tenant marketplace

Software Engineer, Refactory

Sleman, Yogyakarta · December 2022 - December 2023

- Developed features across 5 web applications for international and local clients, as a full-stack or front-end engineer
- Worked across JavaScript, TypeScript, PHP, and C# stacks, including unfamiliar languages and frameworks
- Continued development on legacy projects
- Implemented time-boxed spikes and collaborated with cross-functional teams in Scrum
- Ran weekly online pre-course sessions and an offline workshop as an instructor, and contributed to informative videos

Engineer Intern, Refactory

Sleman, Yogyakarta · September 2022 - November 2022

- Joined through the 3-month Intensive Pairing Program Batch 11, then hired as a Software Engineer

Web Programmer, PT Barqun Digital Teknologi
Samarinda, Kalimantan Timur · August 2019 - June 2021

- Built web-based applications and RESTful web services for 4+ client and internal projects, primarily in charge of the backend
- Conducted analysis and design of database structures, including ERD
- Worked with a variety of languages, frameworks, and content management systems such as JavaScript, PHP, Vue.js, Laravel, and WordPress
- Carried out testing and maintenance on existing applications
- Communicated with teams of developers, project managers, team leads, and clients

SKILLS

- Languages: TypeScript, JavaScript, PHP, Go
- Backend: Node.js, Express.js, Laravel
- Frontend: React.js, Next.js, Vue.js, Tailwind CSS
- Mobile & Desktop: React Native, Electron
- Databases & BaaS: PostgreSQL, MySQL, MongoDB, Supabase, Firebase
- Tools: Docker, Git, Linux

PERSONAL PROJECTS

- Business Profile Website (2022)
- Employee Recruitment Decision Support System (2021)
- School Library Management Application (2021)

EDUCATION

Bachelor's degree in Computer Science (Teknik Informatika / Informatics Engineering)
STMIK Widya Cipta Dharma, Samarinda, Kalimantan Timur · July 2015 - February 2022

LANGUAGES

Indonesian (Native), English (Intermediate)
